Graphing Sine And Cosine

$f(x) = \sin x$; $g(x) = \sin 4x$ 62/87,21 The graph of $g(x)$ is the graph of $f(x)$ compressed horizontally. The period of $g(x)$ is $\frac{\pi}{2}$. To find corresponding points on the graph of $g(x)$, change the x-coordinates of those key points on $f(x)$ so that they range from 0 to $\frac{\pi}{2}$, increasing by increments of $\frac{\pi}{8}$. Sketch the curve through the indicated

Recall our definitions from the Unit

Circle: $\cos \theta = x$, $\sin \theta = y$, $\tan \theta = y/x$.

To graph the basic trig function $y = \sin \theta$,
let's translate the Unit Circle into a table
of values and then graph the function on
the x-y plane.

4.4 Graphs of Sine and Cosine: Sinusoids

The graph of $g(x)$ is the graph of $f(x)$ compressed vertically. The amplitude of $g(x)$ is $-1/3$.

2. $f(x) = \cos x$ $g(x) = -\cos 4x$

The graph of $g(x)$ is the graph of $f(x)$ compressed vertically and reflected in the x-axis. The amplitude of $g(x)$ is $1/4$.

period of $g(x) = 4 \sin x$. Then graph the function and describe the graph of g as a transformation of the graph of $f(x) = \sin x$.

SOLUTION The function is of the form $g(x) = a \sin bx$ where $a = 4$ and $b = 1$. So, the amplitude is $a = 4$ and the period is $2\pi \div b = 2\pi \div 1 = 2\pi$.

Graphs of the Sine and Cosine Functions

Divide the interval into four equal parts to obtain the values for which $\sin bx$ or $\cos bx$ equal -1 , 0 , or 1 . These values give the minimum points, x-intercepts, and maximum points on the graph. Find the midpoint of the interval by adding the x-values of the endpoints and dividing by 2.
