conference on "Finite Volumes for Complex Applications" (Bergen, June 2020) are structured in two volumes. The first volume collects the focused invited papers, as well as the reviewed contributions from internationally leading researchers in the field of analysis of finite volume and related methods. Topics covered include convergence and stability analysis, as well as investigations of these methods from the point of view of compatibility with ...

Finite volume methods are used for various applications in fluid dynamics, magnetohydrodynamics, structural analysis or nuclear physics. A closer look reveals many interesting phenomena and mathematical or numerical difficulties, such as true error analysis and adaptivity, modelling of multi-phase phenomena or fitting problems, stiff terms in convection/diffusion equations and sources.

Hyperbolic Problems Fvca

Overview - Intpart

Description. This volume contains papers presented at the 5th International Symposium on Finite Volumes for Complex Applications, held at Aussois, France, in June 2008. The first part includes papers concerned with: - Theoretical and numerical results, for instance: convergence, new finite volume schemes, adaptivity, approximation of probability laws.
