Evolution is the process of biological change by which descendants come to differ from their ancestors. This concept had been discussed for more than 100 years when Darwin proposed his theory of how evolution works. Today, evolution is a central theme in all fields of biology. The 1700s were a time of great advances in intellectual thought.

Principles of Evolution & Natural Selection - Study.com

Attempting to link the discipline of psychology to the theory of evolution via biological evolution is the aim of evolutionary psychology. In particular, evolutionary psychologists study how the human brain has evolved. The different regions of the brain control different parts of human nature and the physiology of the body. Evolutionary psychologists believe that the brain evolved in response to solving very specific problems.
