In many simple organisms, including bacteria and various protists, the life cycle is completed within a single generation: an organism begins with the fission of an existing individual; the new organism grows to maturity; and it then splits into two new individuals, thus completing the cycle. In higher animals, the life cycle also encompasses a single generation: the individual animal begins with the fusion of male and female sex cells ; it grows to reproductive maturity; and it then ...

Life-cycle assessment or life cycle assessment (LCA, also known as life-cycle analysis) is a methodology for assessing environmental impacts associated with all the stages of the life-cycle of a commercial product, process, or service. For instance, in the case of a manufactured product, environmental impacts are assessed from raw material extraction and processing (cradle), through the product's manufacture, distribution and use, to the recycling or final disposal of the materials composing ...

The life cycle assessment (LCA) of municipal solid waste (MSW) management systems is typically rather arduous due to extensive data acquisition needed to calculate the direct and avoided emissions of the systems. A possibility to diminish the workload of the LCA studies is to utilise default or generic data instead of direct and case-specific data.

The biology of the life-cycle of *Trichuris suis* of the pig is described and discussed together with aspects of the hosi-parasite relationship. Development of the infective L. 1 larval stage within the egg was shown to be influenced by temperature. Following ingestion of infective ova by the pig, all subsequent larval development to the adult stage occurred in the mucosa of the caecum and colon.

This is the first study to examine the entire life cycle in the Middle Ages. Drawing on a wide range of secondary and primary material, the book explores the timing and experiences of infancy, childhood, adolescence and youth, adulthood, old age and, finally, death. It discusses attitudes towards ageing, rites of passage, age stereotypes in operation, and the means by which age was used as a form of social control, compelling individuals to work, govern, marry and pay taxes. The wide scope of the study allows contrasts and comparisons to be made across gender, social status and geographical location. It considers whether men and women experienced the ageing process in the same way, and examines the differences that can be discerned between northern and southern Europe. The fourteenth and fifteenth centuries suffered famine, warfare, plague and population collapse. This fascinating consideration of the life cycle adds a new dimension to the debate over continuity and change in a period of social and demographic upheaval.

Life Cycle Sustainability Assessment for Decision-Making: Methodologies and Case Studies gives readers a comprehensive introduction to life cycle sustainability assessment (LCSA) methodology for sustainability measurement of industrial systems, proposing an efficiency methodology for stakeholders and decision-makers. Featuring the latest methods and case studies, the book will assist researchers in environmental sciences and energy to develop the best methods for LCA, as well as aiding those practitioners who are responsible for making decisions for promoting sustainable development. The past, current status and future of LCSA, Life Cycle Assessment method (LCA), Life Cycle Costing (LCC), Social Life Cycle Assessment (SLCA), the methodology of LCSA, typical LCSA case studies, limitations of LCSA, and life cycle aggregated sustainability index methods are all covered in this multidisciplinary book. Includes models for assessing sustainability in environmental, energy engineering and economic scenarios Features case studies that help define the advantages and obstacles of real world applications Presents a

complete view, from theory to practice, of a life cycle approach by exploring the methods and tools of sustainability assessment, analysis and design of sustainability assessment

The purpose of this book is to collect a high-quality selection of contemporary research articles on life cycle perspectives when we want to assess and predict the sustainability of solutions that lie in front of us. The book focuses on methodologies and tools used for life cycle sustainability management covering environmental, social, and economic aspects in business practices, including modeling and simulation-based approaches. In particular, the book aims to collect research, applications, and case studies in the field of environmental analysis and industrial ecology, with a focus on how to assess contributions to increase resource efficiency and reduce environmental impact on production and service systems in a life cycle perspective (raw material extraction, production, use, and end-of-life management). This book is intended to be a useful resource for anyone who deals with this issue.

In recent years, profound changes have affected the way people view the role of religion and spirituality in the life cycle. For many people, spirituality, always considered an essential part of religion, has become an interest no longer tied to organized religion. This book addresses the evolving relationship of spirituality to religion in our time, and the consequences of this change for understanding personality development. It also applies the concept of implicit religion to show how the least easily observed aspects of religion are at work in the growth of personality.

This book highlights the Social Life Cycle Assessment (SLCA) of the energy and textile sectors. It also presents a range of models, indices, impact categories, etc. for SLCA that are currently being developed for industrial applications. Though SLCA was introduced in 2010, it is still relatively new compared to environmental life cycle assessment (ELCA).

This original and sweeping review of Jewish culture and history examines how and why various rites and customs celebrating stages of the life cycle have evolved through the ages and persisted to this day.

Professing Sociology was originally published at a time when sociology commanded widespread interest and public funding. Written by one of the leaders of "the new sociology" of the late sixties, this volume captures the nature and intensity of the field's intellectual foundations and scope. It reveals the field's post-World War II development as a scientific discipline and as a profession, and includes the author's most significant writings on critical trends shaping the field. Irving Louis Horowitz divides the life cycle of sociology into three main sections. The first deals with the inner life of sociology, covering basic theoretical issues uniting and dividing the profession. In a second section, Horowitz shows the institutions and sources from which the struggle of ideas is nourished. A third section shows how political life shapes the inner life of American sociology. Horowitz gives a great deal of attention to international social science, to the relationship of social science to public policy, and to federal projects and grant agencies and their effects on research. Irving Louis Horowitz was undoubtedly influential in shaping his field, and Professing Sociology offers valuable insights into how ideas become part of the fabric of professional life. As the new introduction by Howard G. Schneiderman shows, Professing Sociology provides a clear picture of sociology at the height of its importance.
