This book aims to be a single point of reference for advances in the care of geriatric populations across medical and surgical specialties. The aging population is a unique demographic with its own health challenges. Geriatricians are specifically trained to address these challenges but few medical students or residents enter geriatrics, even as the demand for geriatric expertise increases. The practices of many medical and surgical specialists are dominated by older patients who may themselves see many specialists but rarely visit geriatricians. This updated edition elucidates the most common medical conditions seen in aging patients and translates approaches to those conditions for physicians across specialties. Divided into three sections that assemble crosscutting issues, medical specialties, and surgical and related specialties, this book serves as a guide for clinicians of all backgrounds who will work with older patients as the demographic ages further. This second edition of Geriatrics for Specialists expands the number of specialist chapters to reflect growth in research in aging and clinical care for older people in dermatology, plastic surgery, and behavioral neurology. All original chapters from the first edition are extensively revised and updated to reflect the rapid growth of new knowledge in the field.

This convenient and easy-to-use pocket-sized reference provides gerontology nurses with the foundational knowledge they need to provide all aspects of safe, effective care to older patients. It contains crucial evidence-based information that enables nurses to differentiate between normal and abnormal findings, understand the presentation and management of common diseases of the gerontological population, and integrate age-specific considerations into care planning and implementation with older adults. Pervading the resource is a holistic approach in which all facets of the individual: physical and mental health, emotional and spiritual wellbeing, self-care, family relationships, and unique risks for this population, are considered. Designed for daily use, the guide is consistently organized in bullet-point Fast Facts style for easy access to information. Also included are such helpful features as "Clinical Snapshots" and "Fast Facts in a Nutshell" to reinforce content and aid in speedy information retrieval. A resources section guides nurses to additional information on each topic. Key Features: Presents all aspects of current evidence-based practice in gerontology in user-friendly style Uses a holistic approach that considers all facets of the individual Provides key information that demonstrates the impact of aging on assessing, planning, and implementing care Features "Clinical Snapshots" and "Fast Facts in a Nutshell" for speedy information retrieval Includes information on gerontology care that is needed daily

Aging well and actively is the real objective of human being. This book is an up-to-date and realistic view on physiopathological mechanisms of aging and age-related diseases. The book includes topical contributions from multiple disciplines to support the fundamental goals of extending active life and enhancing its quality.

Finalist for the Pulitzer Prize in General Nonfiction A New York Times Bestseller Longlisted for the Andrew Carnegie Medal for Excellence in Nonfiction Winner of the WSU AOS Bonner Book Award As revelatory as Atul Gawande's Being Mortal, physician and award-winning author Louise Aronson's Elderhood is an essential, empathetic look at a vital but often disparaged stage of life. For more than 5,000 years, "old" has been defined as beginning between the ages of 60 and 70. That means most people alive today will spend more years in elderhood than in childhood, and many will be elders for 40 years or more. Yet at the very moment that humans are living longer than ever before, we've made old age into a disease, a condition to be dreaded, denigrated, neglected, and denied. Reminiscent of Oliver Sacks, noted Harvard-trained geriatrician Louise Aronson uses stories from her quarter century of caring for patients, and draws from history, science, literature, popular culture, and her own life to weave a vision of old age that's neither nightmare nor utopian fantasy--a vision full of joy, wonder, frustration, outrage, and hope about aging, medicine, and humanity itself. Elderhood is for anyone who is, in the author's own words, "an aging, i.e., still-breathing human being."
